

## Resizing Images

- Click one time on the image
- Eight little squares will appear (one on each of the four sides and one on each corner).
- Click one time on one of the **corner** squares and hold the click (continue holding the left mouse button down)
- **Increasing the size:** drag the square away from the image center until the desired size is reached. A dashed line appears as you are dragging.
- **Decreasing the size:** drag the square towards the center of the image until it is the desired size.

**Do NOT use the squares on the sides to adjust the size of the image. This will cause your image to be distorted and out of proportion.**
